[What next?](#)

Install Appexchange package

If not already done, install SharinPix package from AppExchange:

<https://bit.ly/SharinPixAppExchange>

Salesforce Classic

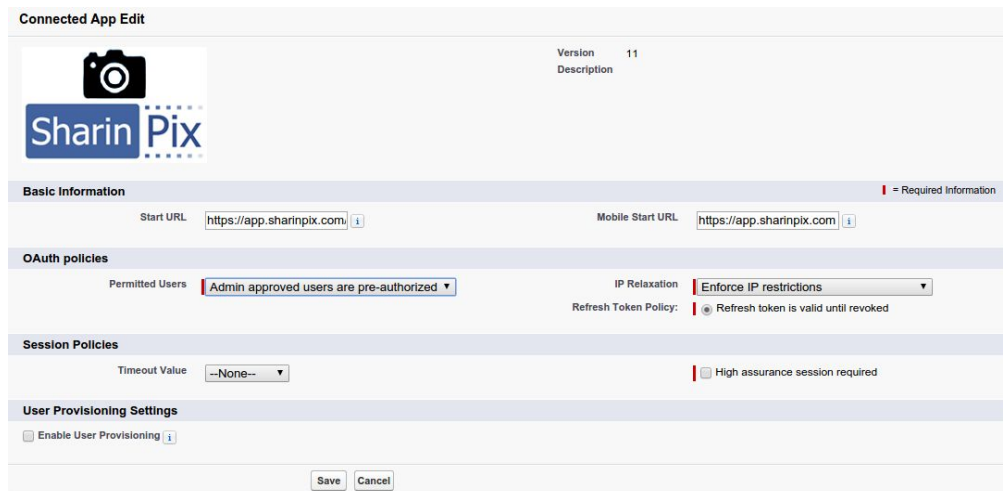

Grant access to SharinPix application

It is necessary to grant access to SharinPix application for your Salesforce organization.

- Navigate to: Setup > Administration Setup > Manage Apps > Connected Apps

Note: For some environment, navigate as follows: Administer > Manage Apps > Connected Apps

- Click on “Edit” link in from of “Albums” application
- In section “OAuth policies”, change “Permitted Users” to “Admin approved users are pre-authorized”

The screenshot shows the 'Connected App Edit' page for SharinPix. The page includes a header with the SharinPix logo and a camera icon. Below the header, there are sections for 'Basic Information', 'OAuth policies', 'Session Policies', and 'User Provisioning Settings'. The 'Basic Information' section shows the Start URL as 'https://app.sharinpix.com' and the Mobile Start URL as 'https://app.sharinpix.com'. The 'OAuth policies' section shows 'Permitted Users' set to 'Admin approved users are pre-authorized', 'IP Relaxation' set to 'Enforce IP restrictions', and 'Refresh Token Policy' set to 'Refresh token is valid until revoked'. The 'Session Policies' section shows 'Timeout Value' set to '--None--' and 'High assurance session required' set to 'No'. The 'User Provisioning Settings' section shows 'Enable User Provisioning' set to 'No'. At the bottom, there are 'Save' and 'Cancel' buttons.

- Click on “Save” button.
- Click on “Albums” application.
- In related list “Profiles”, click on button “Manage Profiles”

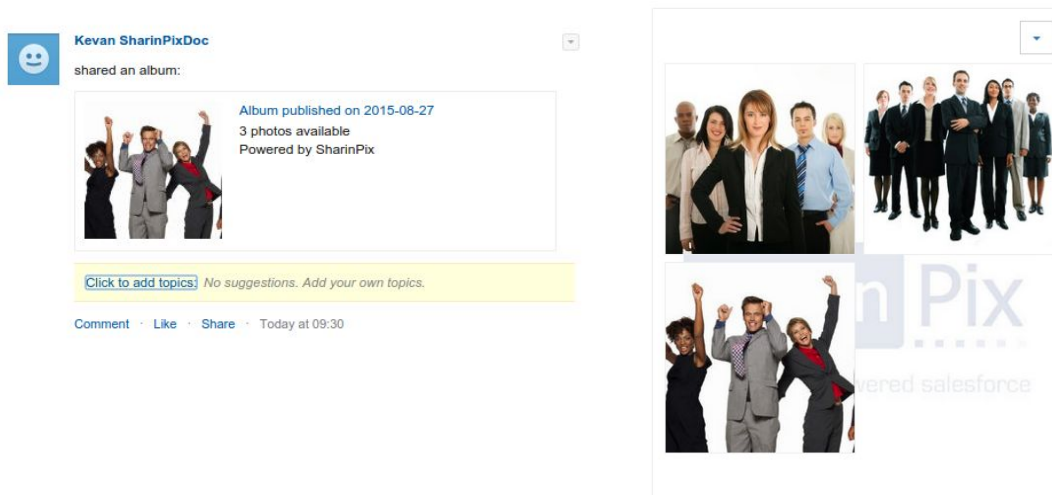

The screenshot shows the 'Profiles' section for SharinPix. It includes a 'Manage Profiles' button and a message stating 'No profiles associated with this app.'

- Select profile who can access the app
- Click on “Save” button.

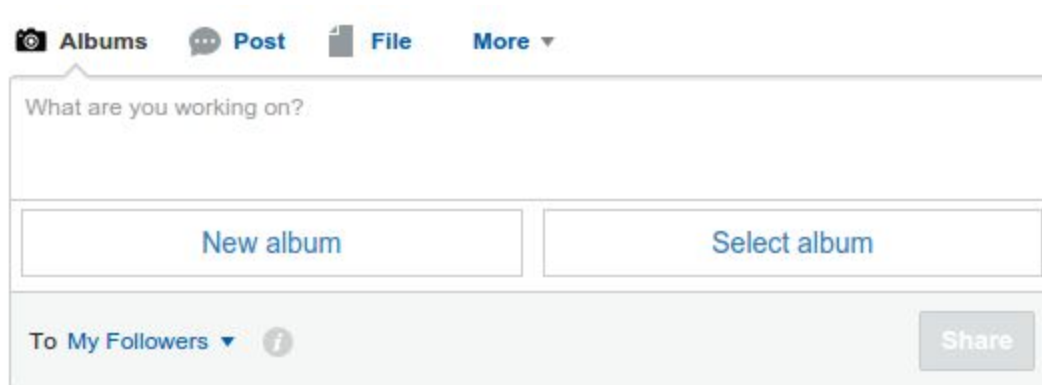

SharinPix for Chatter

Add SharinPix Chatter publisher action

If you want SharinPix to be accessible through Chatter feed, you need to add publisher action.

- Navigate to: App Setup > Create > Global Actions > Publisher Layouts
- Edit layouts and add “Albums” global action

Note: If publisher action is not showing in chatter publisher on Salesforce, ensure Actions are enabled in Publisher:

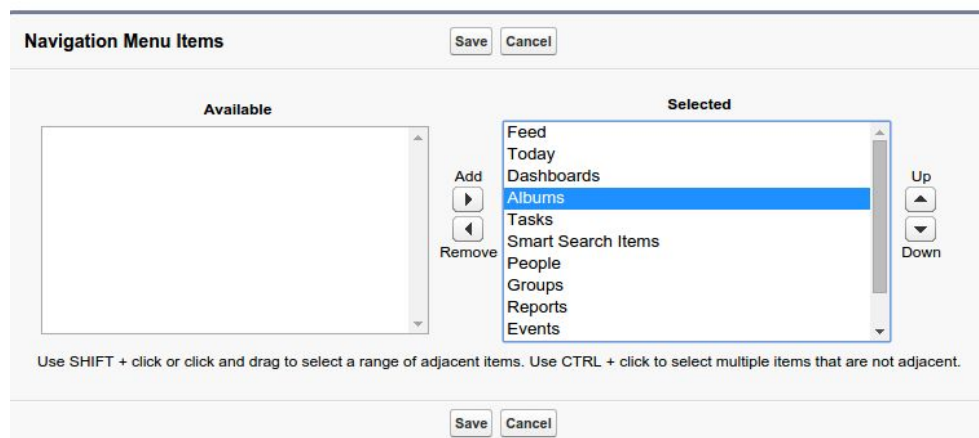

- Navigate to: App Setup > Customize > Chatter > Settings
- Check “Enable Actions in the Publisher”

Add SharinPix menu to Salesforce mobile App

If you want SharinPix album console to be accessible through Salesforce mobile App, you need to add a menu entry in mobile navigation.

- Navigate to: Administration Setup > Mobile Apps > Salesforce Navigation
- Move album to the selected Navigation Menu Items

Navigation Menu Items

Save Cancel

Available Selected

Add Remove Up Down

Feed
Today
Dashboards
Albums
Tasks
Smart Search Items
People
Groups
Reports
Events

Use SHIFT + click or click and drag to select a range of adjacent items. Use CTRL + click to select multiple items that are not adjacent.

Save Cancel

- Click on “Save” button.

SharinPix for Objects

SharinPix for Objects can be configured in 2 different ways:

- inline VisualForce: using an inline Visualforce added on page layout of the object
- Canvas: using a canvas added on page layout of the object

If inline Visualforce offers more flexibility to control access of users (who can add, edit, remove, etc, pictures for the object), Canvas offers a better integration to Salesforce mobile App.

SharinPix Album embedded in Visualforce page on object in Salesforce mobile App

Inline Visualforce in page layout

- Create a new apex class and add the code snippet below:

```
public class SharinPixDemo {
    public String parameters { get; set; }

    public SharinPixDemo(ApexPages.StandardController stdCtrl) {
        Id contactId = stdCtrl.getId();
        Map<String, Object> params = new Map<String, Object> {
            'abilities' => new Map<String, Object> {
                contactId => new Map<String, Object> {
                    'Access' => new Map<String, Object> {
                        'see' => true,
                        'image_list' => true,
                        'image_upload' => true,
                        'image_tag' => true,
                    }
                }
            }
        }
    }
}
```

```

        'image_crop' => true,
        'image_rotate' => true,
        'image_delete' => true
    }
}
}
};
parameters = JSON.serialize(params);
}
}

```

Note: the above class was named as “SharinPixDemo”. You can use a different name if you want, but it shall be replaced in the Visualforce page that will be implemented below.

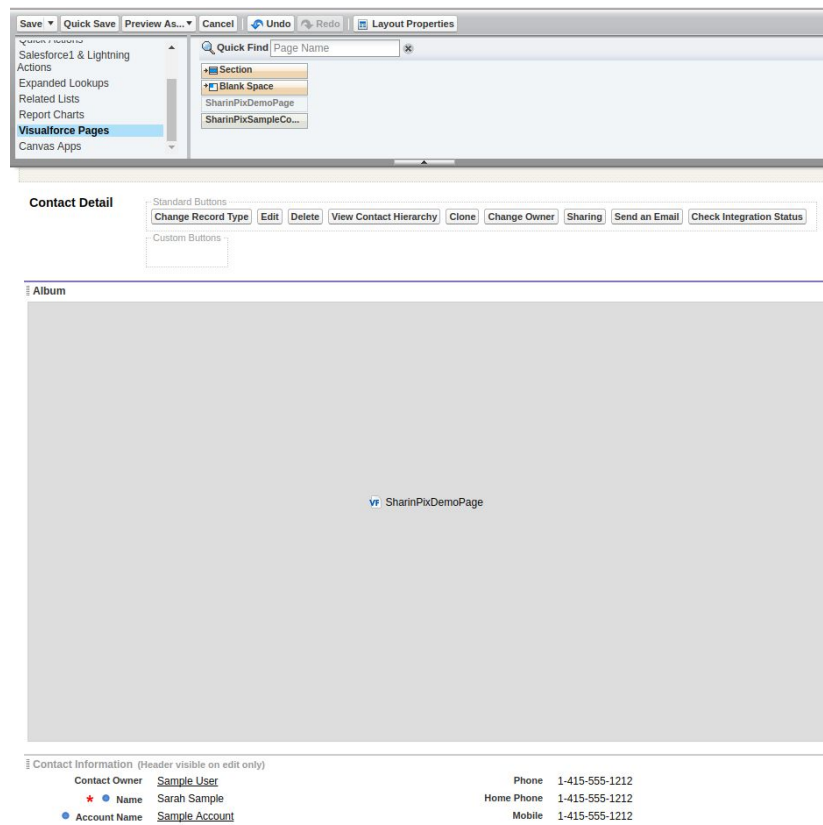

- Create a new Visualforce page (named SharinPixDemoPage in our case):

```

<apex:page standardController="Contact" extensions="SharinPixDemo">
    <apex:canvasApp developerName="Albums" height="500px" parameters="{! parameters }"
width="100%"/>
</apex:page>

```

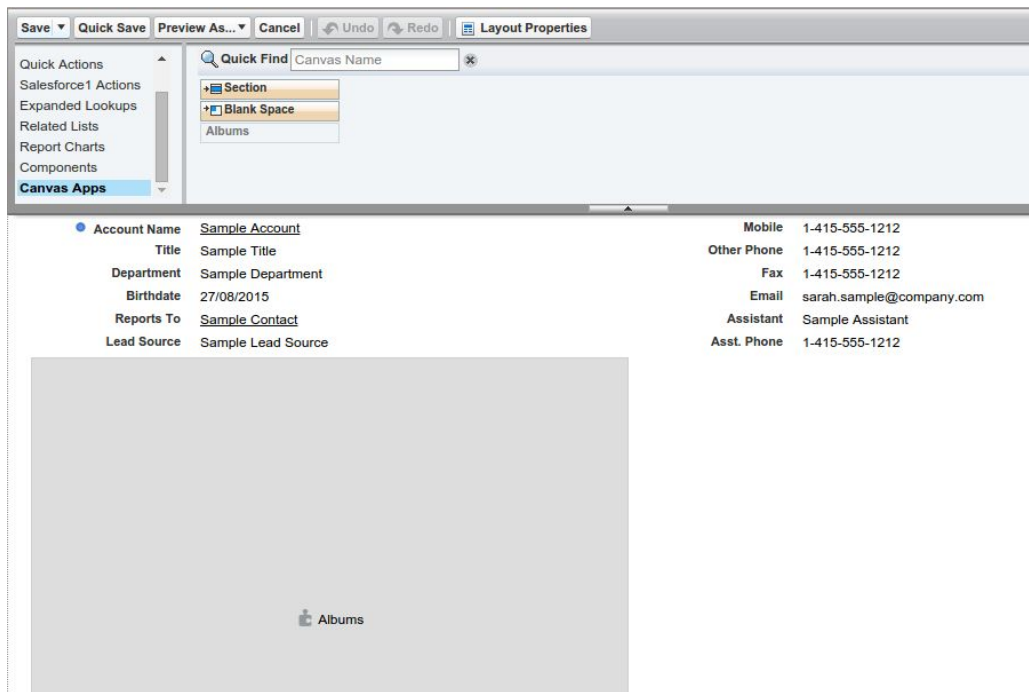

A minimum height of 500px is needed in order for the album to display correctly. This height should be added in the Visualforce page code and also while on the page layout when adding the Visualforce page into it.

Canvas in page layout

- Navigate to page layout of the object and edit desired page layout.
- Add canvas to page layout

The canvas app must have a minimum height of 500px.

SharinPix album on Visualforce without Apex controller

Get the Visualforce Page integration (faster than the Canvas App) without the need of writing a controller. This will rely on the standard controller for your object (works as well for custom object).

The only modification you have to operate in the following code is to replace **Contact** by the API name for your object.

Don't forget to check the security settings for your Apex Page to make sure your users have access to it.

Furthermore, you can change the way your album works by modifying the abilities from true to false for the following parameters :

paste	Paste Command in the menu
image_copy	Copy (CTRL+C or Cmd+C) support
image_download	Download button on the toolbar
image_rotate	Rotate button on the toolbar
image_crop	Crop button on the toolbar
image_delete	Delete from Icon on the thumbnail
image_upload	Add Button from Thumbnail view

For more information about those abilities, please check <http://bit.ly/SharinPixAdminguide>

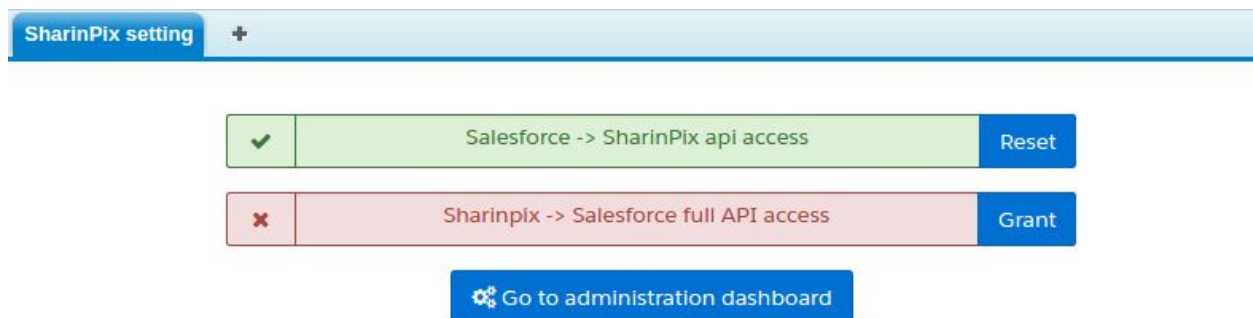

Implementation Steps

VisualForce page

```
<apex:page standardController="Contact">
    <apex:canvasApp developerName="Albums" height="500px"
parameters="{abilities:{'!CASESAFEID($CurrentPage.Parameters.Id)}':{Access:{paste:true,image_
copy:true,image_download:true,image_rotate:true,image_crop:true,image_delete:true,image_upload
:true,image_list:true,see:true}}}" width="100%"/>
</apex:page>
```

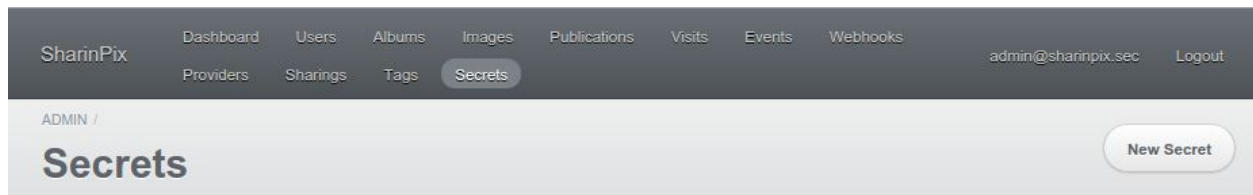

SharinPix API Configuration

To access the SharinPix API, you need to view the SharinPix setting tab. Your API credentials will be configured automatically and a green tick should appear for Salesforce -> SharinPix api access. Salesforce can now interact with the SharinPix API. Accessing this page also makes you a SharinPix administrator for your organization.

To view the API credentials generated for you:

- Click on the administration dashboard button
- Click on the “Secrets” menu

- You will see the secret that was created for your organization listed.

If you delete the secret, it will be created again the next time you view the SharinPix setting tab on Salesforce.

You can now use SharinPix API by simply looking at the class “Client” found under “Develop > Apex Classes”

Contact SharinPix for demos on how to use the client api.

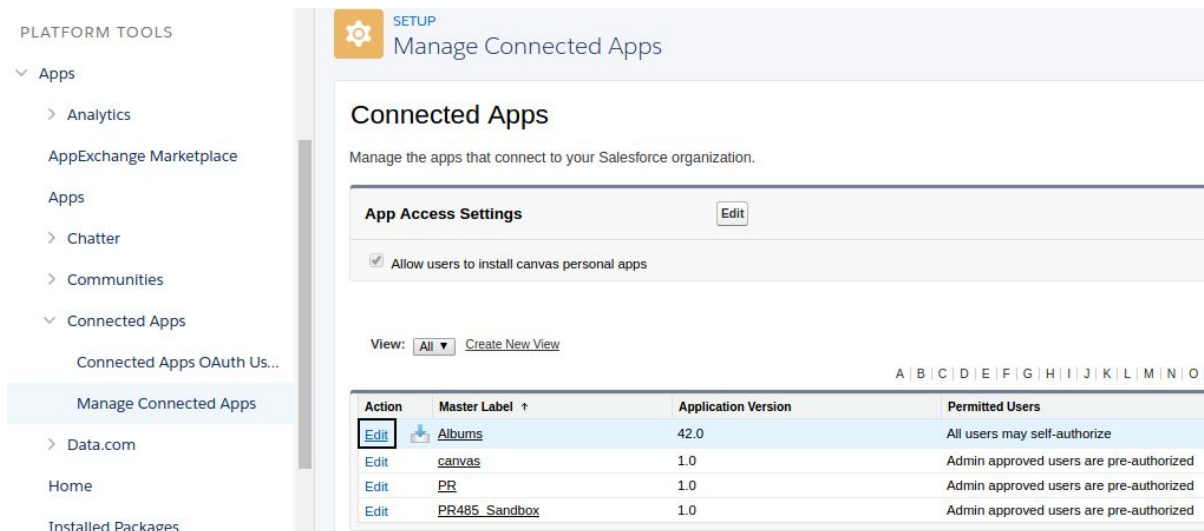

The SharinPix -> Salesforce full API access is for users who need to grant full API access to their Salesforce organization to SharinPix. Click on Grant to allow access to SharinPix.

Salesforce Lightning

Grant access to SharinPix application

It is necessary to grant access to SharinPix application for your Salesforce organization.

- Navigate to: Setup > Apps > Connected Apps
- Click on “Edit” link in from of “Albums” application

The screenshot shows the Salesforce Setup interface for 'Manage Connected Apps'. The left sidebar lists 'PLATFORM TOOLS' with 'Apps' expanded, showing 'Connected Apps' and 'Manage Connected Apps' selected. The main content area is titled 'Manage Connected Apps' and includes a 'Connected Apps' section with a table of applications. The 'Albums' application is highlighted, and its 'Edit' link is visible. Below the table, there is a section for 'App Access Settings' with a checkbox for 'Allow users to install canvas personal apps' and a 'View' dropdown set to 'All'.

Action	Master Label ↑	Application Version	Permitted Users
Edit	Albums	42.0	All users may self-authorize
Edit	canvas	1.0	Admin approved users are pre-authorized
Edit	PR	1.0	Admin approved users are pre-authorized
Edit	PR485 Sandbox	1.0	Admin approved users are pre-authorized

- Under the section “OAuth policies”, change “Permitted Users” to “Admin approved users are pre-authorized”

- Click on “Save”

Configure SharinPix API access

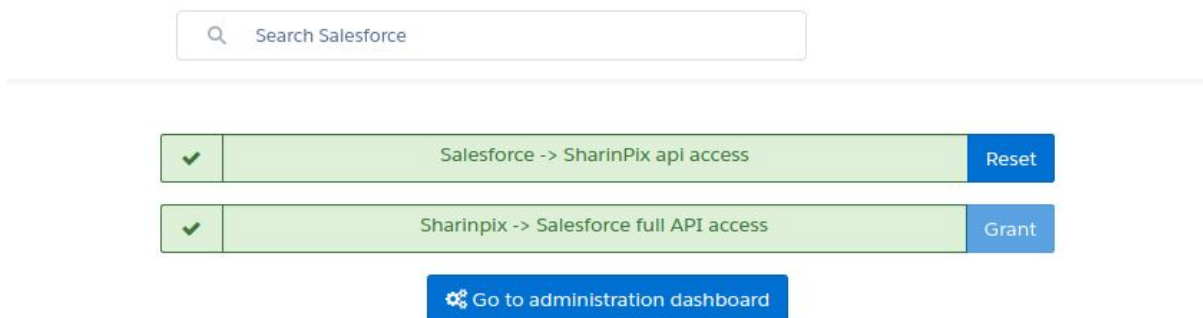

To configure SharinPix API access, go to App Launcher [1] > Other Items [2].

Click on SharinPix setting from the list.

A page will open which will automatically set up SharinPix access on your environment.

The Salesforce -> SharinPix api access box should be checked automatically and turn green.

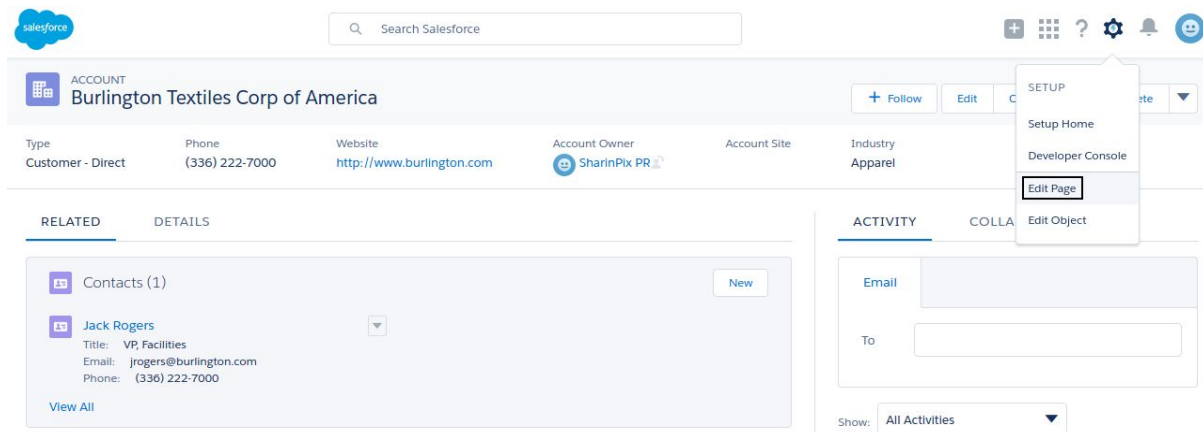

Granting SharinPix -> Salesforce full API access is not necessary at this point.

If you are facing an error through this automatic API registration, please send an email to support@sharinpix.com

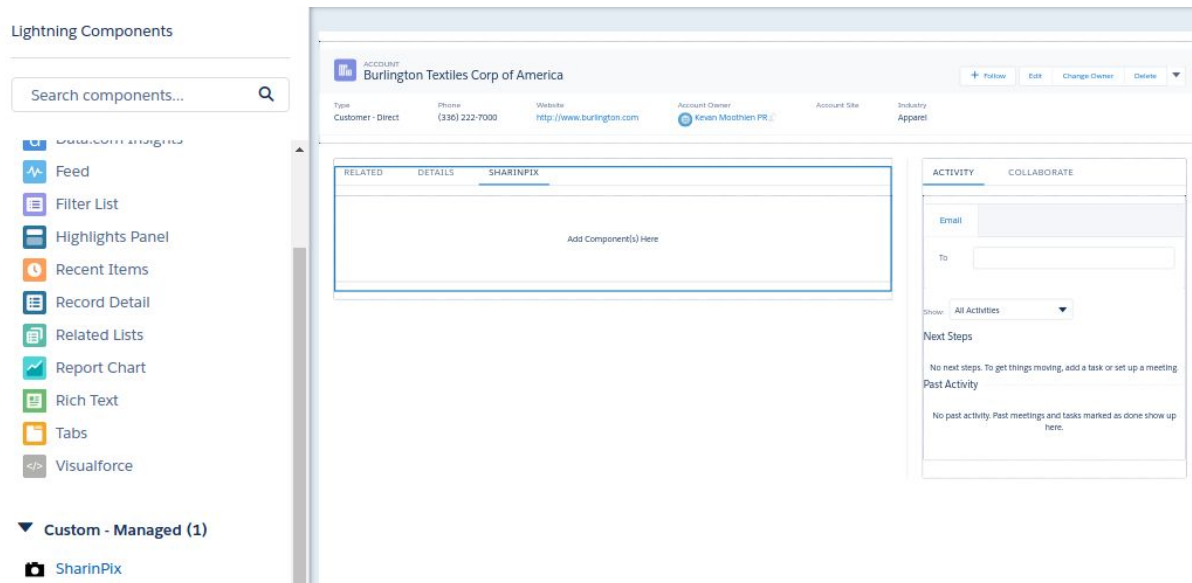

Add SharinPix to an object

To add SharinPix Lightning component on an object layout, go to the object’s setup and edit its page. The example object to be used here is Account.

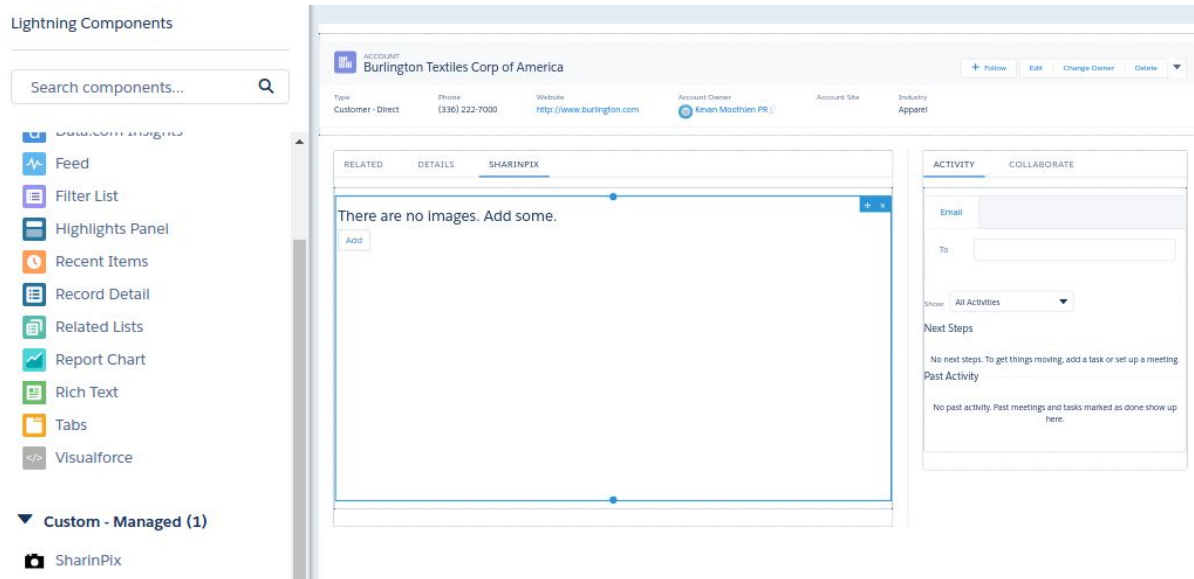

Go to an Account > Setup icon > Edit Page

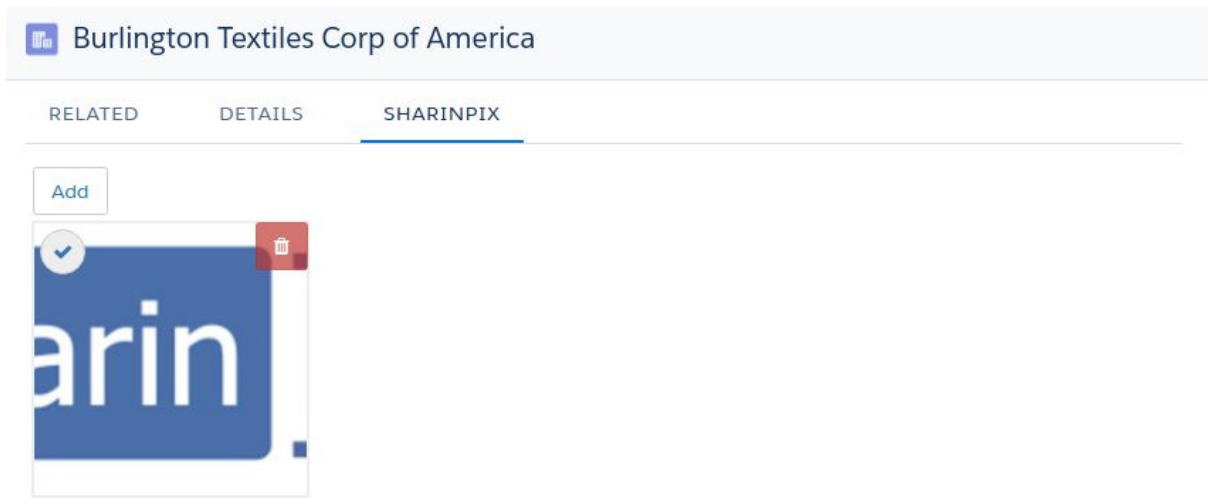

From the “Lightning Components” list, click on the “SharinPix” component and drag it to where you want to place it.

A preview of the component will appear. Click on “Save” when done. If you are editing an object’s page for the first time, you may have to activate the page after save.

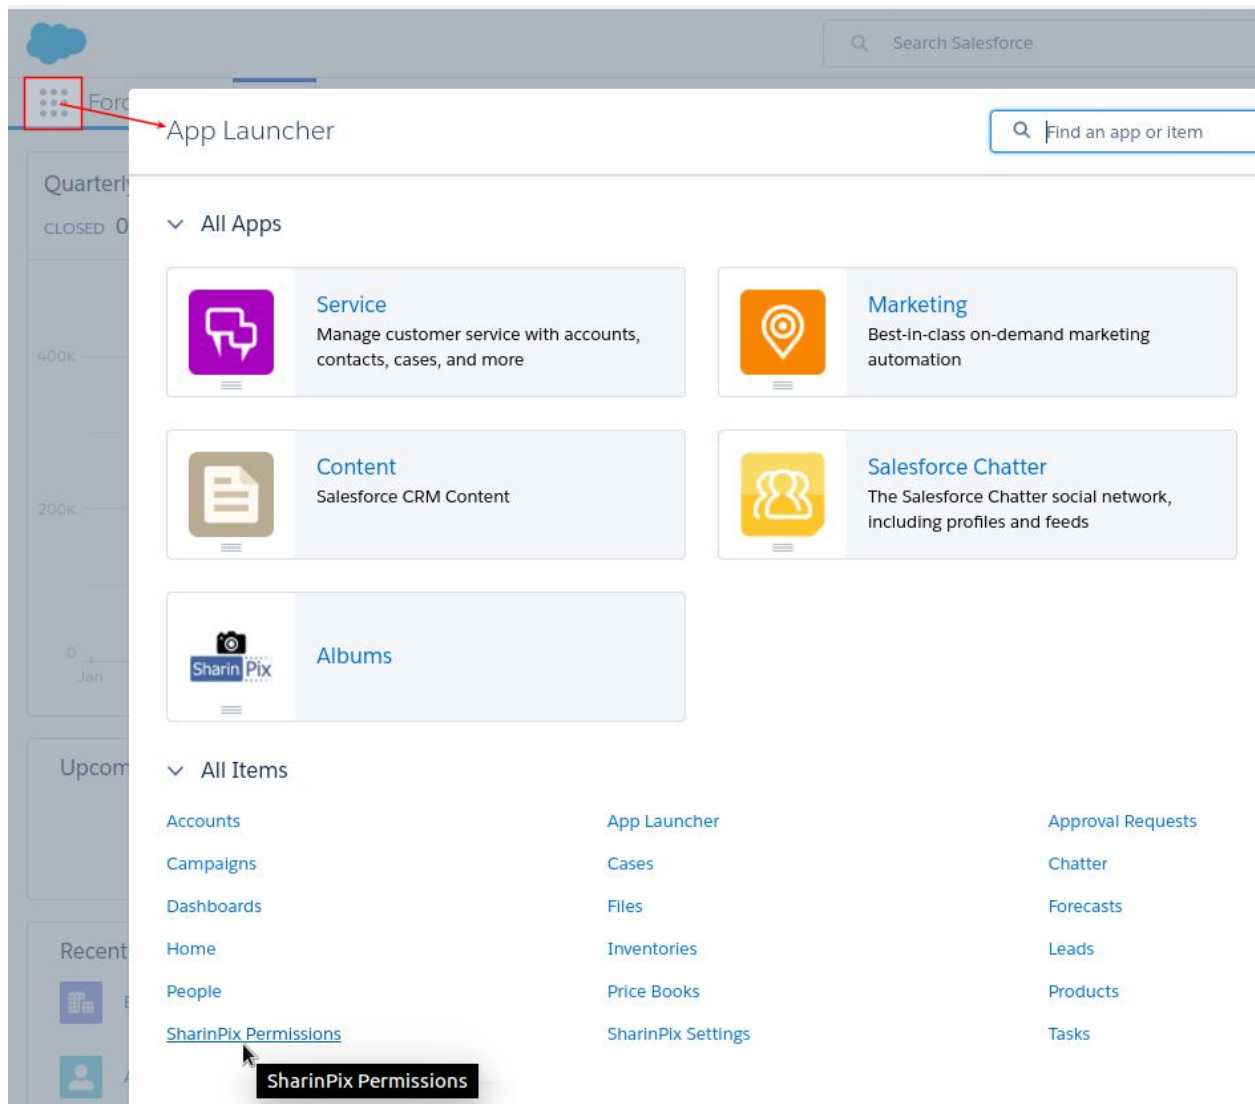

You now have access to SharinPix from Lightning Experience.

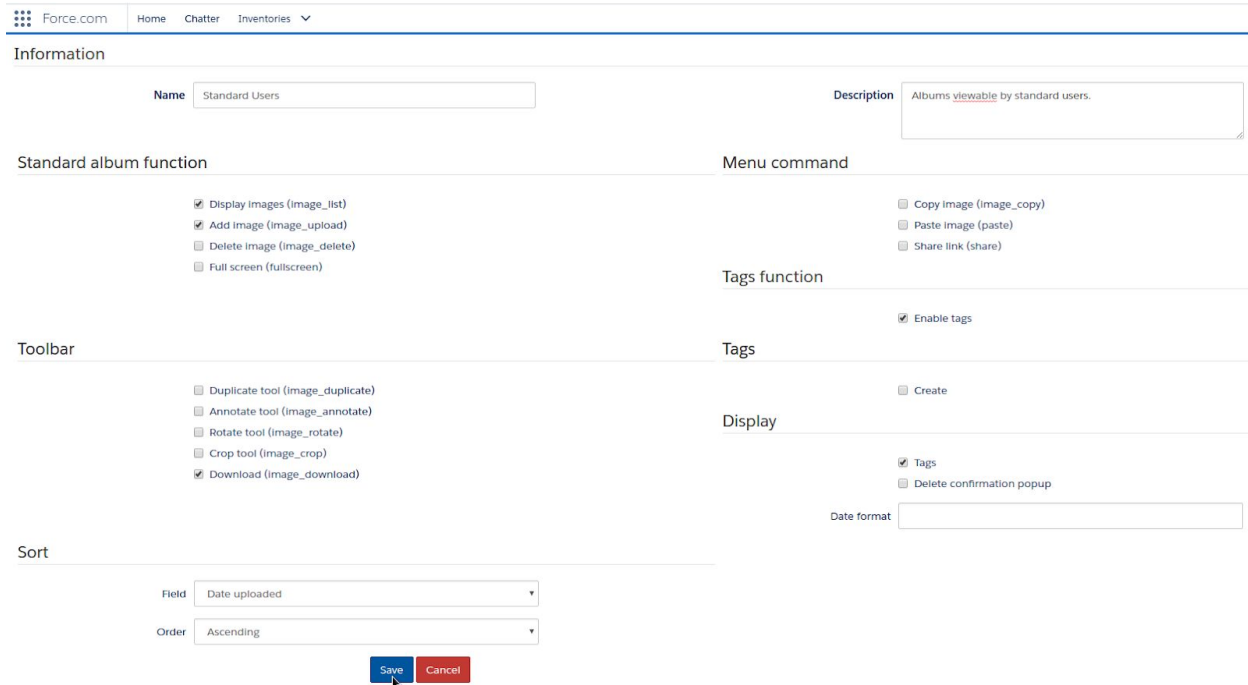

Custom Permissions on Lightning components

By default, the abilities added on an album displayed via Lightning are based on the rights of the user in the record related to the album. If you want to customize the abilities of your users on the SharinPix lightning component, you can do so by using the SharinPix Permissions tab from the App Launcher.

Next, select New to add a new Permission object.

Type in a Name and Description of your choice and select the permissions to allow to album viewers. Click the Save button when you're finished.

The screenshot shows the 'New Permission' form in Salesforce. The 'Name' field is 'Standard Users' and the 'Description' is 'Albums viewable by standard users.' The form is divided into several sections:

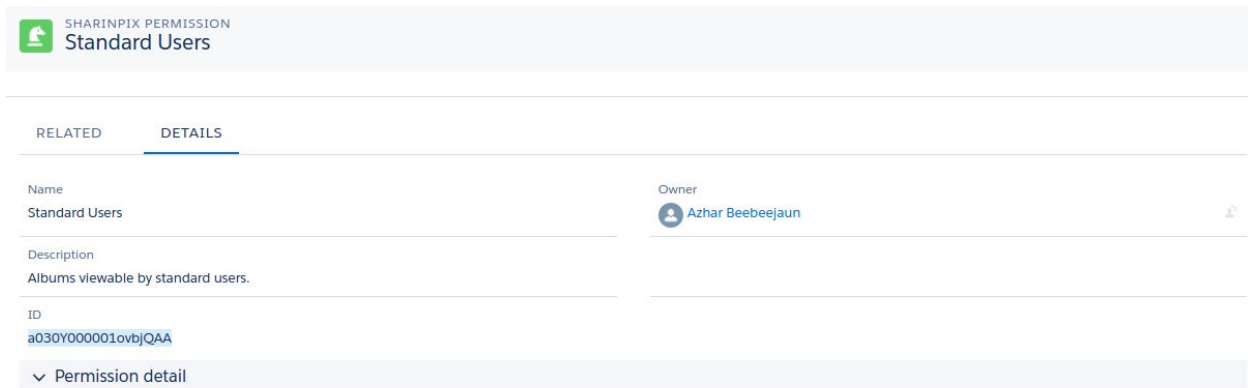

- Standard album function:** Includes checkboxes for 'Display images (image_list)', 'Add image (image_upload)', 'Delete image (image_delete)', and 'Full screen (fullscreen)'. The first two are checked.
- Menu command:** Includes checkboxes for 'Copy image (image_copy)', 'Paste image (paste)', and 'Share link (share)'. None are checked.
- Tags function:** Includes a checkbox for 'Enable tags', which is checked.
- Tags:** Includes a checkbox for 'Create', which is not checked.
- Display:** Includes checkboxes for 'Tags' (checked) and 'Delete confirmation popup' (not checked).
- Date format:** An empty text field.
- Toolbar:** Includes checkboxes for 'Duplicate tool (image_duplicate)', 'Annotate tool (image_annotate)', 'Rotate tool (image_rotate)', 'Crop tool (image_crop)', and 'Download (image_download)'. The last one is checked.
- Sort:** Includes dropdowns for 'Field' (set to 'Date uploaded') and 'Order' (set to 'Ascending').

At the bottom, there are 'Save' and 'Cancel' buttons.

Note that the page above might change as we add new features and abilities.

Now that your record is saved, copy (Ctrl+C or Cmd+C or right-click+copy) the Id of the Permission object to your clipboard.

This is available in the ID field on the object.

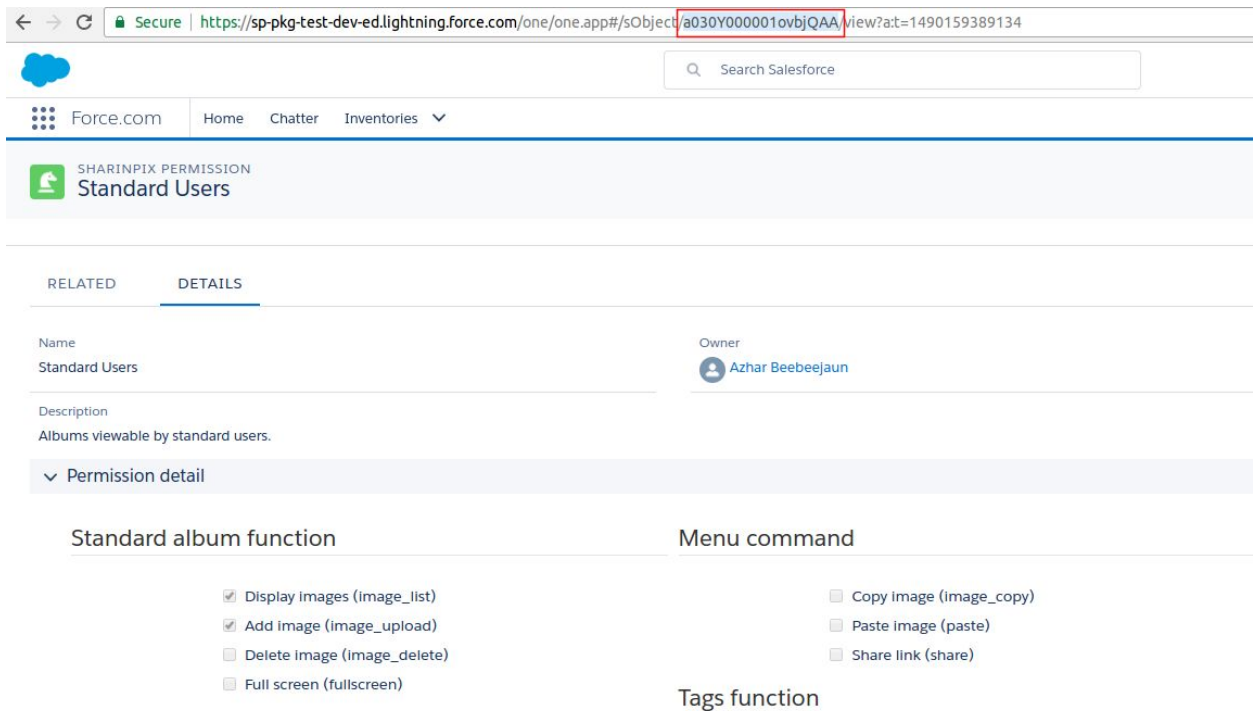

The screenshot shows the 'Details' page for the 'Standard Users' permission object. The page has a header with 'SHARINPIX PERMISSION' and 'Standard Users'. Below this, there are tabs for 'RELATED' and 'DETAILS'. The 'DETAILS' tab is active, showing the following information:

- Name:** Standard Users
- Description:** Albums viewable by standard users.
- ID:** a030Y000001ovbjQAA (highlighted in blue)
- Owner:** Azhar Beebeejaun

At the bottom, there is a link to 'Permission detail'.

If not present on the page layout, then this is also available in the URL of the page as highlighted below.

SharinPix Search

SharinPix provides you with the ability to view all images from albums specified by a report. To access the Search screen, view the SharinPix Image Search tab. The tab is initially available for Salesforce System Administrators only; you may give the necessary permissions to your users as you deem fit.

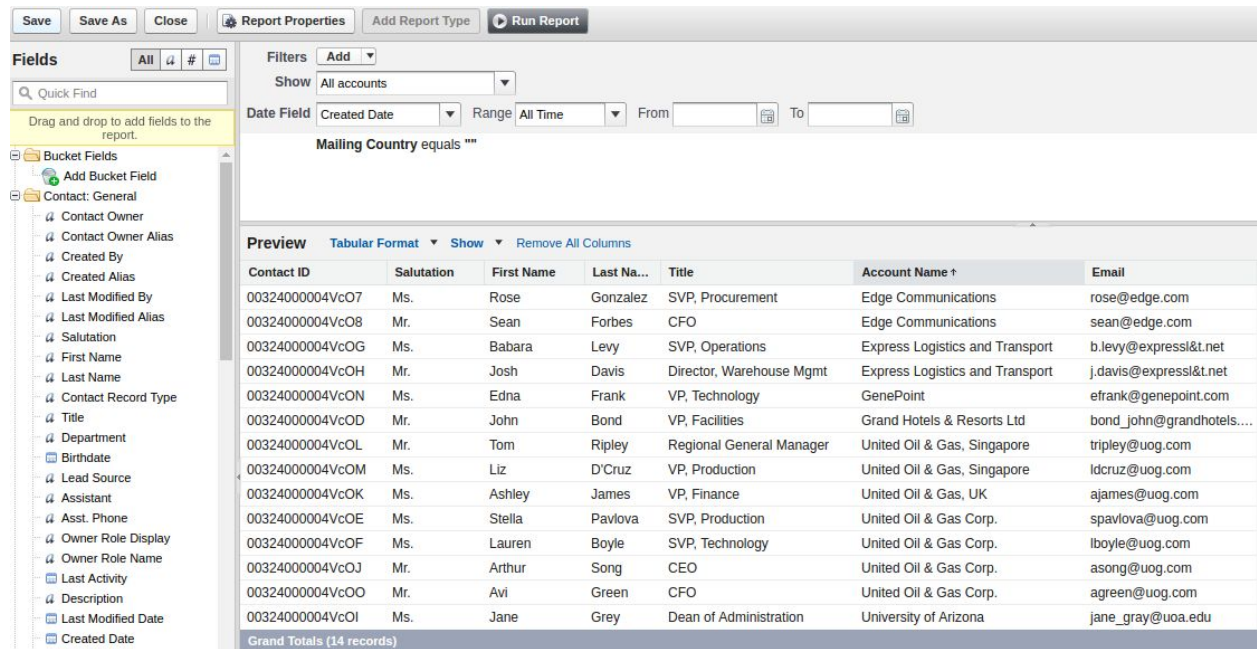

The screenshot displays the SharinPix Image Search interface within a Salesforce navigation bar. The navigation bar includes tabs for Home, Chatter, Accounts, Contacts, Cases, Reports, Inventories, SharinPix Settings, and SharinPix Image Search (which is currently selected). The main content area is divided into several sections:

- Report ID:** A text input field containing the value "0000Y000006oBBaUAM".
- Report List:** A dropdown menu showing "All Contacts Report".
- Filter by tags:** Three buttons labeled "None", "Any of", and "All of". The "Any of" button is currently selected.
- Tags:** A list box showing three tags: "Profile Picture", "Sea", and "kherintag". "Profile Picture" is selected.
- Affixes:** A section with four checkboxes:
 - ☒ None (default)
 - ☐ Other
 - ☐ Required
 - ☒ User

Below these filters, there is a grid of six images showing people at an event. The images are arranged in two rows of three. The first row shows a man in a red shirt and a woman in a white dress. The second row shows a woman in a black dress and a woman in a black and white patterned dress. All images are set against a red carpet background.

To do an image search,

1. Create a report with the object's ID column as the first column. The screenshot below shows the example given to us for the filter conditions, with the added Contact: ID column.

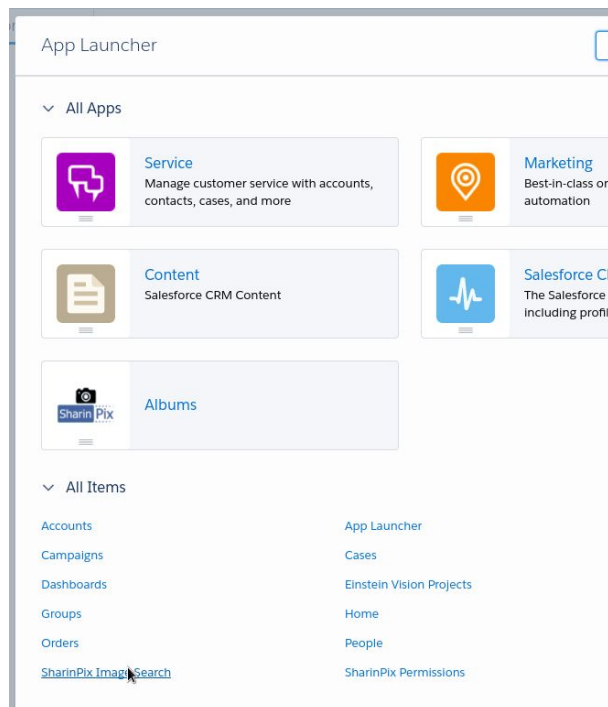

The screenshot shows the Salesforce Report Builder interface. At the top, there are buttons for 'Save', 'Save As', 'Close', 'Report Properties', 'Add Report Type', and 'Run Report'. Below these, the 'Fields' section on the left lists various fields under 'Bucket Fields' and 'Contact: General'. The 'Filters' section on the right shows a filter for 'Mailing Country equals ""'. The 'Preview' section displays a table of 14 records.

Contact ID	Salutation	First Name	Last Name	Title	Account Name ↑	Email

Grand Totals (14 records)

2. Next, go to the SharinPix Image Search tab on Salesforce.
 - a. You can either specify the report ID manually.
 - b. Or select the report from the list of reports. Note that standard Salesforce reports are not present on the list.

Salesforce Lightning, find it under App Launcher:

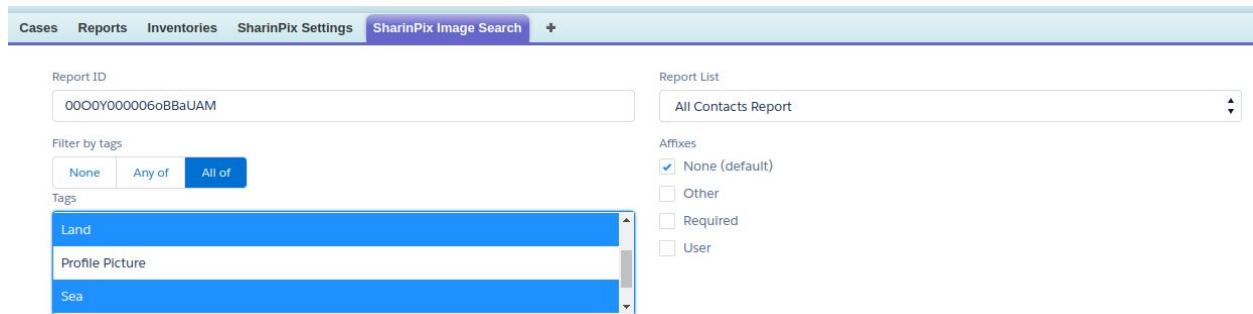

Salesforce Classic, find it as a Custom Tab:

- To filter the results by certain tags, select “Any of” or “All of”. “Any of” searches for all the images with at least one of the selected tags. “All of” searches for images with all the selected tags.

For example, if you want all images with the tags “Land” and “Sea,” select both tags from the list.

Once a report ID is selected, the Search will automatically start.

The screenshot shows the SharinPix Image Search interface. At the top, there is a navigation bar with tabs: Cases, Reports, Inventories, SharinPix Settings, and SharinPix Image Search (which is active). Below the navigation bar, there are two main sections. On the left, under 'Report ID', there is a text input field containing '0000Y000006oBBaUAM'. Below this, there is a 'Filter by tags' section with three buttons: 'None', 'Any of', and 'All of'. The 'Any of' button is selected. Below the buttons is a 'Tags' list with three items: 'Land', 'Profile Picture', and 'Sea'. The 'Land' and 'Sea' items are highlighted in blue. On the right, under 'Report List', there is a dropdown menu showing 'All Contacts Report'. Below this, there is an 'Affixes' section with four checkboxes: 'None (default)' (checked), 'Other', 'Required', and 'User'.

If you are using special album IDs on objects, for example, an object that contains two albums with IDs “<ObjectID>_Req” and “<ObjectID>_Other” to distinguish between images that are required and other images respectively, you may make use of the Affixes section to filter those images from the Search results. See next section on how to define the Affixes to be used. If no affix is selected, the IDs will be used as search queries without any affixes.

Defining affixes for SharinPix Search

Affixes are either prefixes or suffixes that are affixed to Salesforce object IDs that are retrieved from reports used for searching images. For instance, creating a prefix with value “User_” and using it in search will do a search on IDs prefixed with it, that is, “0030Y00000AKAUI” will become “User_0030Y00000AKAUI”.

To create an affix, go to Setup > Build > Develop > Custom Metadata Types under Salesforce Classic or Setup > Custom Code > Custom Metadata Types under Salesforce Lightning. Or else, simple search for “Custom Metadata Types” in the Setup search bar.

Then click on Manage Records next to SharinPix Search Affix.

SETUP
 Custom Metadata Types

All Custom Metadata Types

Custom metadata types enable you to create your own setup objects whose records are metadata rather than data. These are typically used to define custom objects or custom settings. Rather than building apps from data records in custom objects or custom settings, you can create custom metadata types and add metadata records count against SOQL limits.

Action	Label	Installed Package	Namespace Prefix	Visibility	Api Name
Manage Records	 SharinPix Search Affix	sharinpix	sharinpix	Public	sharinpix__SharinPix_Search_Affix__mdt

Manage Records - Record 1 - SharinPix Search Affix

Click on “New” to create a new prefix or suffix.

The Label field is the text displayed on the SharinPix Image Search form; the Affix Type is whether the Affix Value entered should be prefixed (prepended) or suffixed (appended) to the ID. The Affix Type should either be “Prefix” or “Suffix”. Affix Value is the actual value that is affixed to the ID; this will be used as is.

To set an initial value on the Search form, check or uncheck the “Initial value on SharinPix Search form.”
